

std::logic_error

```
classDiagram
    class InvalidValueException {
        +InvalidValueException()
    }
    class std_logic_error["std::logic_error"]
    InvalidValueException --|> std_logic_error
```

The diagram illustrates an inheritance relationship. At the bottom is the 'InvalidValueException' class, represented by a gray-shaded box with a black border. It contains a public constructor '+ InvalidValueException()' in its bottom section. Above it is the 'std::logic_error' class, represented by a white box with a gray border. A blue arrow with a hollow triangular head points from the 'InvalidValueException' class to the 'std::logic_error' class, indicating that 'InvalidValueException' inherits from 'std::logic_error'.

InvalidValueException

+ InvalidValueException()
